Life Is Precious

The gracefulness
of a butterfly,
How gentle,
and fragile they seem.

Gently fluttering,
on a calm summers day,
Floating like,
a dream.

But sadly,
there time is over,
Hardly before
it's begun.

So enjoy
your special moments,
Like a butterfly,
In the sun.

By John Read 10 Jan 2012.

1.1 The differential equation of $y' + 2y = 0$, $y(0) = 1$
 is $y = e^{-2x}$. Derive it and sketch a few
 answers to it.

Solution

$y' + 2y = 0$ is a form $y' + P(x)y = Q(x)$
 with $P(x) = 2$ and $Q(x) = 0$.
 We use the integrating factor $e^{\int P(x) dx} = e^{2x}$.
 Multiplying the equation by e^{2x} gives
 $(y e^{2x})' = 0$.
 Integrating both sides gives
 $y e^{2x} = C$, where C is a constant.
 So $y = C e^{-2x}$.
 Using the initial condition $y(0) = 1$ gives
 $1 = C e^0 = C$, so $C = 1$.
 Hence the solution is $y = e^{-2x}$.

Sketch

The solution is $y = e^{-2x}$.
 It is a decreasing exponential function.
 It passes through the point $(0, 1)$.
 As $x \rightarrow \infty$, $y \rightarrow 0$.
 The graph is a smooth curve that starts at $(0, 1)$ and approaches the x-axis as x increases.

SUMMARY & ANALYSIS

OF

BRIEF ANSWERS TO THE BIG QUESTIONS

A GUIDE TO THE BOOK
BY STEPHEN HAWKING

== ZIPREADS ==

If you had to move 3000 miles away,
what one thing would you miss most?

Brief answers to the big questions price.

A short story of time is joined to the bestsellers lists as soon as it appeared in 1988 and remained there in the next decade. We will transcend the earth and learn to exist in space. But there is a sense in which we live, in our influence and in our genes that we transmit to our children. I use the word God in an impersonal sense, as Einstein did, for the laws of nature, therefore knowing the mind of God is to know the laws of Nature ... but schools can only offer an elementary picture in which sometimes the Race learning, equations and exams can alienate children from science. There is no reliable tests for this, and flies in front of everything that we know in science. The spark of the investigation and wonder. The basic intake of science is scientific determinism. The laws of science determine the evolution of the universe, given its state simultaneously. It is how to ask for indications to the limit of the earth - the earth is a sphere that does not have an advantage, so looking for it is a useless exercise. Try to make sense of it that you see and ask that it makes the universe exist. The only remaining area that religion can now claim is the origin of the universe, but even here science is making progress and should soon provide a definitive response to how the universe began. I was not the easier person to teach, I was slow to learn to read and my calligraphy was disordered. I have no desire to tell anyone what to believe, but for me ask me if God exists is a valid question for science. Worse still, we could discover that technology is used against us and that we may not have the power to stop it. However, only a small percentage of the population has also read the most successful books. Sizzle: People want answers to the big questions, such as the reason why we are here. [...] The foundations for the future They must be in schools and inspire teachers. Telephone orders min p & p of £ 1.99. It opened my eyes in mathematics as the project of the universe of the universe I published a book that asked me if God created the universe and that aroused a sensation. In the middle, there are personal responses to the question of God, to the colonization of the question of space, the question of artificial intelligence, the survival of the question of the planet and even his discs of the desert island. The observable universe has modeled itself without a cause and has a clear energy of zero energy. When each of us thinks of what we can do in life, it is likely that we can do it because of a teacher. Each of us is free to believe that we want, and it is my opinion that the simplest explanation is that there is no God. It draws in half a million words archived over the decades in the form of essays, Lessons, key speeches and - since a short history of time made it a celebrity and its long fight against the disease has made it an icon - it is aimed at some of the questions that, over the decades, so many people They had often asked him. Those who followed the writer after 1988 will find a lot that seems familiar. I have faith? Sizzle: The human mind is an incredible thing. I think when we die we go back to the dust. And I am optimistic that in the end we will create habitats practicable for the human race on other planets. He has contributed to reviving an appetite for popular scientific books, in particular those with space in time, wonder, alien intelligence, superhuman and God. Brief responses is one of his latest projects, completed for him after his death. I think the universe has been created spontaneously from nowhere, according to the laws of science. He sold more than 20 million copies into 40 languages and transformed an astronomer into a star, famous enough to sparkie in the guests' apparitions in Star Trek and Simpsons. This is not the case. Sun. I use the word God in an impersonal sense, like Made Einstein, for the laws of nature, therefore knowing the mind of God is to know the laws of nature. Can conceive the magnificence of the skies and the Del Of the basic components of the mat ... so remember to look at the stars and not you already at your feet. Let me be clear. But I am claiming that all young people should have familiarities and confident on scientific topics, anything they choose to do. In the next 50 years, he says: "We will find out what happened to the Big Bang. Radioastronomi have separately identified the tempting evidence of the creation inscribed in the cosmos that year. There is a pretty preface by Eddie Redmayne, who interpreted Hawking In the theory of everything, the 2014 film of his life: there is a weighted introduction by his colleague and friend Kip Thorne, the Californian scientist behind the identification, in 2016, of the gravitational waves generated by the collision of two Black holes; there is a touching afterword by his daughter Lucy Hawking. Sfrigo: when I was growing it was still acceptable - not for me but in social terms - to say that one was not interested in science and did not see the point to disturb us . The universe is the last free lunch. "he writes. It would be, she says "our worst error ever" to reject the notion of highly intelligent machines as simple science fiction. My prediction is that we will know the mind of God by the end of this century. We will continue to explore our cosmic habitat, sending robots and humans to space. And he wants more exploration of the space with crew. Hawking and Roger Penrose proved to be mathematically in 1965 that time, space and matter must have had an beginning in an infinitely small and dense point. Pioneering thinkers leave their names about their science. This is not the end of the story, but only the beginning of Cié that I hope of billions of years of flourishing life in the cosmos. And one last point - we never really know where the next great scientific discovery will come from, nor whoever does it. À ç à - à "if it is continuing for another million years, our future is going boldly boldly No one else went before. à ç à ç people who discuss a good education for everyone, a decently financial SSN and a serious investment in research will collect him as a friend. One gives a new look at the problem of how complex the universe is well beyond our horizon: The other returns to the intractable but apparently not entirely insoluble problem of Cié who happens to information once he falls into a black hole. A world in which only a small super-over-the Lite is able to understand advanced science and technology and its applications would be a dangerous and limited, in my opinion. Model the future. Wherever it could be. This leads me to a profound realization: there is probably not even a paradise and life after life. We cannot continue to look at each other on a small and more polluted and overcrowded planet. We are threshold of important discoveries in all areas of science. While the possibility of communicating with an intelligent extra-terrestrial species can be scarce, the importance of this discovery means that we must not give up trying. I do not see it as an ideal situation, since the world needs people with a large variety of qualification. Him's latest book is, however, a market test of Cié who is known in the publishing world as a hawking effect. Documentaries and scientific films reach a mass audience, but it is only a one -way communication. Cié leaves God with the freedom to choose the initial state of the universe, but even here it seems that there may be law. People want answers to the big questions, such as the reason why we are here. Without a doubt, our world changed enormously in the next fifty years. To order a copy for à £ 12.89 (RRP à £ 14.99) go to Guardianbookshop.com or call 0330 333 6846. Through scientific effort and technological innovation, Looking towards the outside of the largest universe, while it will strive to solve the problems on Earth. When people ask me if a God created the universe, I tell them that the itself makes no sense. He does not think of most of the anti-immigration ideologies of Brexit or Trump, but says it with Brevità. And he admits that despite all the incredible progress of cosmological physics in his life, the final theory that defines the reason why the universe is as the universe is, the theory of everything, it seems far as in 1988. For those Readers who have invested in a short story and perhaps they have never finished it, there is good news: almost everything in short answers is without instructive, absorbent effort, up to the minute and - where it counts - witty. But when I had fourteen teachers in my school in St Albans, Dikran Tahta, he showed me how to exploit my energy and encouraged me to think creatively about mathematics. This second document is a response to a paradox that concerns only theoretical physicists, but the former deals with the machinery of creation that seems not to need any creator. Not surprisingly, he returns to both themes and many others in it that his publishers call him the final thoughts of him. We will understand how life has started on earth. Let's make sure that wisdom wins. àvelop that human aggression and new technologies - nuclear newspapers, AI, genetic engineering, global warming - could destroy the entire human race and much of the rest of life on earth. And however much difficult life may seem, there is always something you can do and be successful. We will understand how life has started on earth. By opening the thrill and wonder of scientific discovery, creating innovative and accessible ways to reach the largest possible audience, it greatly increases the possibility of finding and inspired the new Einstein. Sizzle: I do not believe in the borders, both for what we can do in our personal life or by it that life and intelligence can achieve in our universe. P & p Free Over à £ 10, online orders only. So God would have no freedom. This does not disturb him. Me He doubts that long -haul beneficial projects such as the cleaning of the oceans or the diseases to be cured in developing countries would have the priority. It can conceive the magnificence of the skies and the complexes of the basic components of the matter. The deceased Stephen Hawking did not believe in an afterlife, but he has the same. I am not promoting the idea that all young people should grow to be scientists. They do not expect the answers to be easy, so they are ready to fight ... often that spark comes from a teacher. They do not expect the answers to be easy, so they are ready to fight a little. It is important that you don't give up. He appeared as a co -author in two posthumous research documents since he died in March. If you look behind each exceptional person there is an exceptional teacher. We have this life to appreciate the great design of the universe, and for this reason I am extremely grateful. I do not believe in the borders, both for what we can do in our personal life or by it that life and intelligence can achieve in our universe. I think that the belief in an afterlife is just a pious desire. We could even find out if life exists elsewhere in the universe. We could even find out if life exists elsewhere in the universe. As he says more than once, he prefers optimism to pessimism. We will find out what happened to the Big Bang. Allow me to explain. When I was growing it was still acceptable - not for me but in social terms - to say that he had not been interested in science and did not see ... but for every mind to achieve his full potential, he needs a spark. People got angry about the fact that a scientist should have had something to say about the question of religion. "Our future is a race between the growing power of our technology and the wisdom with which we use it. Most people respond to an understanding rather than quantitative, without the need of complicated equations. Complicated. Another unknowable object also pursues to establish the theoretical reality of an elusive identity, immediately nicknamed the radiation of the hawk, from the inside of the prohibited borders of a black hole. His scientific peers embrace him. After all, it is difficult to think of a more important or fundamental mystery of that or who has created and controls the universe. À ç àvelop "If the universe does not add to anything, then you don't need a God to create it. Be curious. À ç àvelop "one point I thought I see the end of physics as we know it, but now I think that the wonder of the discovery continues a long time after I will be gone. Short answers to the big questions are published by John Murray. Books and articles of popular sciences can also put ideas on the way we live. These laws may or not, having been decreed by God, but cannot intervene to interrupt the laws, or would not be laws. They must be scientifically literate and inspired to commit themselves with the developments of science and technology in order to find out more. Nobody created the universe and nobody directs our destiny. The human mind is an incredible thing. Unleash your imagination. Time did not exist before the Big Bang, so there is no time when God can be the universe. I don't believe in the borders, both for what we can do in our personal life or by it that life and intelligence can make in our unit ... universe ...
